

The Evict Radon National Study

Key information about radon for **home buyers.**

EVICT RADON

A CANADIAN CANCER
PREVENTION STUDY

Canadian cancer researchers are working to find solutions to our national radon problem. Help them by testing your new home for radon today.

LET'S EVICT RADON FROM CANADA

This message brought to you by The Evict Radon National Study, funded by Health Canada, Alberta Real Estate Foundation, Canadian Institutes of Health Research and the Canadian Cancer Society.

When moving into a new home, it's important to determine what the radon levels are early on.

If you are going to renovate after purchasing, you should test for radon after all renovations are completed

High radon is **EASILY FIXABLE**, and is not a reason to be put off buying a home you like

Radon-mitigated properties will have very low radon and are the healthiest homes you can buy

EVICT RADON

KEY FACTS

- 1 in 5 single family residential properties are above 200 Bq/m³
- All homes are unique, the only way to know the radon in your home is to test
- Radon mitigated Homes have the healthiest air possible

Short term tests are generally unreliable and may give a false high or low reading

Buyers should only use radon test reports that are provided by a certified CNRPP professional

Only long term radon tests performed for three or more months (91+ days) are reliable

If you are purchasing to rent out, some provinces* have legal obligations to ensure low radon to protect tenant health

* BC and AB
